

WEILL CORNELL MEDICAL COLLEGE  
 CLINICAL TRANSLATIONAL SCIENCE CENTER (UL1 RR024996)  
 NCRR ADMINISTRATIVE SUPPLEMENTS

**IMPORTANT DATES** → **BUDGETS DUE - MONDAY MAY 4, 2009 at 12 NOON**  
**PROPOSALS DUE - WEDNESDAY MAY 6, 2009 at 12 NOON**

Title and Link	Purpose	Goals and Objectives	Total Costs (TC)	# Apps.
<a href="#">Admin. Supplements to Advance Translational (T1 &amp; T2) Research</a>	To enhance current NCRR-supported research, technology development, training and dissemination. NCRR has particular interest in applications that bring together expertise, infrastructure, and resources from different programs or disciplines to enhance research and capacity building. Also of interest are enhanced dissemination and implementation of discoveries across the spectrum of biomedical and behavioral science, from the lab to clinical investigation and translation of research advances into clinical practice.	To support innovative research activities and infrastructure improvements that enhance collaborations, technologies, methodologies, approaches, resources, and/or capacity to facilitate translation across the research continuum, from basic discovery to clinical practice. Translational and clinical research benefit from partnerships & networks among investigators, effective resource sharing, productive communications & collaborations, and innovative approaches to create an inclusive matrix with shared expertise that is greater than the sum of each individual knowledge base. Networking across NCRR programs is encouraged. Investigators may wish to consider linkages between similar or related programs that address a shared research need within or between institutions.	NCRR will look most favorably on requests <\$500,000 TC per year, but may consider supporting a limited number of requests between \$500,000 and \$1M TC per year with strong justification.  Requests may include up to \$500,000 for alteration & renovation projects and up to \$100,000 for equipment, however the TC cannot exceed the limits set above. Sub-contract awarding is allowed.	2 per parent award
<a href="#">Admin. Supplements for the CTSA Consortium Strategic Goals</a>	To enhance and facilitate research infrastructure, efficiency, and capacity through the CTSA Consortium Strategic Goals.	To support CTSA Strategic Goals to enable effective and efficient translation of basic biomedical research findings into clinical practice and health care decision-making.	Up to \$300,000 TC	1 per parent award
<a href="#">Admin. Supplements for Enhancing NCRR Pilot Project Mechanism</a>	To facilitate providing expertise, infrastructure, and resources for collaborative research efforts enabled through the NCRR portfolio.	To enhance NCRR Center and Center-like pilot programs by providing funds for new, innovative studies by investigators previously not supported through the pilot mechanism.	Up to \$200,000 TC per year	1 per parent award
<a href="#">Admin. Supplements for Collaborative Community Engagement Research</a>	To foster community engagement and community based participatory research infrastructure with NCRR programs (e.g., CTSA, IDeA, SEPA and RCMI). Examples of community partners might include CBOs or clinical research networks such as Prevention Research Centers, PBRNs, HMO Research Networks, Community Health Centers and existing NIH funded networks.	To provide support for collaborations with a community health focus between two or more NCRR-awardee institutions that will benefit from the infrastructure and existing community partnerships. It is anticipated by engaging the community in an active dialogue, healthy life style choices, increased rigor of community health evaluation metrics, and an educated community about the clinical trials process will lead to community able to make informed decisions.	Up to \$300,000 TC per year.	1 per parent award
<a href="#">Admin. Supplements for Research Workforce Development and Dissemination</a>	To provide new training opportunities to the next generation of clinical and translational scientists, & disseminate the scientific process and research discoveries to the broader community.	To support innovative and novel activities that enhance skills essential to conduct clinical and translational research. Preference will be given to activities whose educational impact extend, or can be disseminated beyond, the awardee institution.	Up to \$300,000 TC per year.	2 per parent award
